

Product description

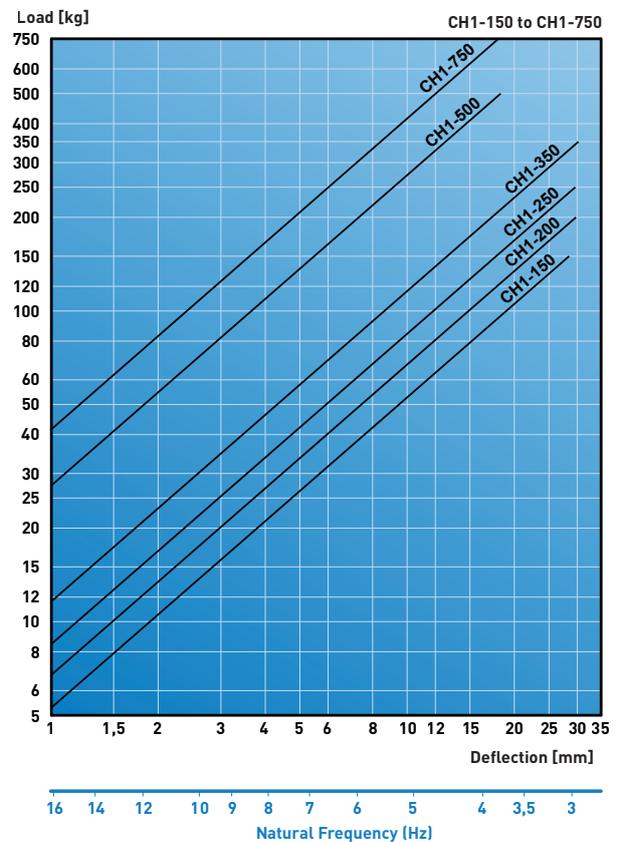

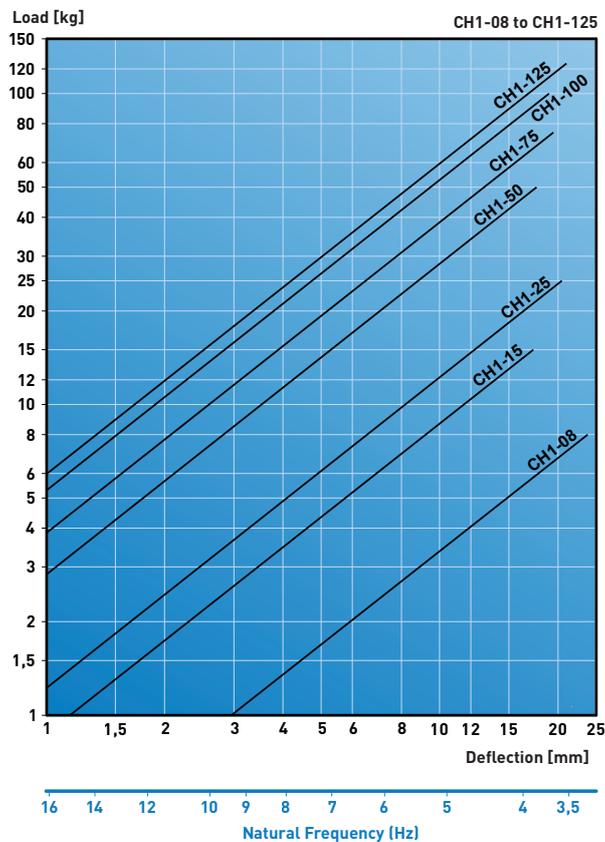

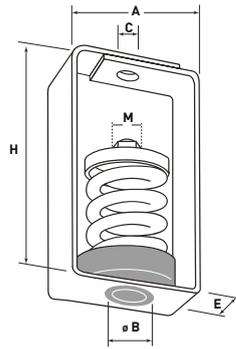

CH1 is designed for acoustic ceilings which are to be suspended elastically, or for the vibration isolation of pipes and machines at speeds or frequencies of more than 400 rpm. Loads from 25–350 kg.

Components

The ceiling bracket consists of a spring inserted into a bent steel bracket. The spring rests in a rubber cup which eliminates the transfer of high frequencies. All metal surfaces are galvanised.

Application

When mounting, the rubber cup and spring are removed so that the bent steel brackets can be mounted on the ceiling.

Type	A [mm]	H [mm]	B Ø [mm]	C Ø [mm]	E [mm]	M	Load [kg]	Deflection [mm]
